**Just enter the Start Time (i.e.15:01:23) and then the finish time for each boat.
The Spread Sheet will then calculate the adjusted time and rank the winners
Score Method is Time-on-Time i.e: $\text{Adjusted Time} = \text{Actual Time} \times \text{TCF (Time Correction Factor)}$
Where $\text{TCF} = A / (B + \text{PHRF})$; A = 700, B = 480 for heavy air, 550 for average, and 650 for light**
